Vidura Gunawardana

Data Science Undergraduate

TonyRoyze

Kadawatha, Sri Lanka +94 71 430 7140 vidurapr@gmail.com https://tonyroyze.github.io/

Summary

I am a dedicated undergraduate at the University of Colombo and a versatile Independent Developer. My approach to technology is deeply influenced by my background in competitive sports and music that have instilled in me a unique blend of analytical rigor, creative problem solving, and a commitment to collaborative excellence.

As a developer, I specialize in building high-performance, user-centric digital solutions. I thrive at the intersection of data science and complex system architecture, constantly exploring new technologies to bridge the gap between sophisticated data analysis and intuitive user experiences. My experience in competitive athletics has forged a mindset of resilience and strategic leadership, while my passion for music continues to refine my attention to detail and ability to work in harmony within diverse teams.

Experience

Aayu Technologies — **April - October 2023**
Intern Front-end Developer — Mount-Lavinia, Srilanka
https://aayutechnologies.com/

Aayu Technologies is a specialized software firm providing enterprise-grade B2B messaging and file transfer solutions. During my internship, I contributed to their cloud-native ecosystem, which includes:

- **MFT Gateway**: A world-class SaaS platform for secure B2B file transfers using the AS2 protocol, built on a serverless architecture.
- **AS2 Gateway**: A secure document exchange engine ensuring data integrity and non-repudiation in business transactions.
- **EDI Generator**: A tool designed to simplify the creation and management of standard EDI documents like Purchase Orders and Invoices.

Key Responsibilities & Learning:

- **Frontend Development (Angular)**: Enhanced the management dashboards for the gateways, focusing on real-time transfer monitoring and trading partner configuration. Implemented UI refinements to improve responsiveness and reduce layout shifts (CLS).
- **Backend Development (Java Spring Boot)**: Gained experience in building scalable backend services for B2B data processing. Worked on core logic for document parsing and secure communication protocols.
- **Cloud-Native Solutions**: Explored the integration of serverless technologies (AWS) in building cost-effective and scalable B2B communication software.
- **Optimization & Documentation**: Identified UI bottlenecks and documented optimization strategies, contributing to the overall performance of the web applications.

TS Technologies — **June 2022 - December 2022**
Intern Front-end Developer — Colombo 04 , Sri Lanka

TS Technologies is a leading digital solutions provider in Sri Lanka, specializing in systems integration and smart automation for sectors like banking, healthcare, and retail. During my internship, I contributed to their suite of customer experience and operational efficiency tools, including:

- **Queue Management Systems**: Developed and refined interactive interfaces for both physical and virtual queuing solutions, streamlining customer flow for major banking and healthcare clients.
- **Digital Signage & Feedback Solutions**: Assisted in building dynamic content management systems for digital signage and real-time customer feedback tools.
- **Interactive Smart Panels**: Worked on UI components for advanced collaboration panels used in corporate and educational environments.

Key Responsibilities & Learning:

- **Frontend Development (React)**: Focused on building modular, reusable components for enterprise-level web applications. Refactored legacy CSS into utility-first patterns using Tailwind CSS to improve maintainability and performance.
- **Backend Development (Java Spring Boot)**: Gained experience in developing RESTful APIs and integrating MySQL/MongoDB databases for data-driven applications.
- **Enterprise Integration**: Assisted in the digital transformation of business operations by implementing features for people counting and automated reporting systems.
- **Full-Stack Collaboration**: Participated in the complete software development lifecycle (SDLC), from front-end component design to back-end API connectivity.

Education

University of Colombo — **May 2023 - Present**
Data Science — Bachelor of Science (Hons.)

- **Mathematical Foundations**: Advanced study in Pure and Applied Mathematics, providing the rigorous basis for statistical algorithms and data analysis.
- **Statistical Modelling**: Mastery of probabilistic models, regression analysis, and predictive analytics to solve real-world problems.
- **Machine Learning & AI**: Hands-on experience with supervised and unsupervised learning, neural networks, and deep learning architectures.
- **Data Analytics & Visualization**: Developing skills in interpreting large datasets and communicating findings through professional-grade visualization tools.
- **Computer Science**: Applying data structures, algorithms, and software engineering principles to optimize data processing pipelines.

Cardiff Metropolitan University — **March 2022 - September 2023**
Computer Science — Higher Diploma

A comprehensive foundation in modern software development and systems engineering, covering the full software development lifecycle (SDLC).

- **System Design & Implementation**: Developed proficiency in designing scalable system architectures and implementing them using industry-standard practices.
- **Full-Stack Web Development**: Gained extensive experience in both frontend and backend technologies, focusing on creating dynamic and responsive web applications.
- **Database Management Systems**: In-depth study of relational database design, SQL, and data integrity management (RDBMS).
- **Networking & Communications**: Understanding the fundamentals of network protocols, security, and infrastructure management.
- **Mobile Application Development**: Designed and built cross-platform mobile solutions, prioritizing user-centric design (UI/UX).

St. Peters College Colombo 04 — **2022**
Physical Science — Advance Level

Successfully completed the G.C.E. Advanced Level Examination in the Physical Science stream, excelling in Combined Mathematics, Physics, and Chemistry. This period laid the groundwork for my analytical and problem-solving skills in engineering and data science.

Esoft Metropolitan Campus — Diploma
Information and Communication Technology

Gained a foundational understanding of the computing landscape, including core principles of information technology, software development, and network infrastructure. This program served as my initial entry into the field of computer science and technical problem-solving.

Volunteering

St. Andrew Avellino Dhaham Pasala — **2022 - 2023**
Catechist — Kadawatha

Taught Grade 7 students, managed the Mass Media department, and actively contributed as a member of the Prefects committee.

Lions Club of Colombo Visionaries — **December 2025 - Present**
Assist. Treasurer

Orabi Pasha Cultural Center — **2022**
iBelong Visits

Visiting elderly and special needs homes to foster a sense of community and belonging.

AIESEC CC — **2023 -2024**
B2B and DXP Team Leader

Skills

Programming Languages

TypeScript, Python, R, Rust, Java, C++, C#

Frontend Frameworks

React, Next, Astro, Solid, TanStack, Angular

Back-end & Core

Java Spring boot, Node.js, SQL, Electron, Tauri, React Native

Languages

English

Sinhala
